

TRAFFIC COATING SYSTEM | D-PRIME • D-GUARD • D-GRIP

The Next Evolution in Vehicular Deck Protection

The **DriveDeck** system is a polyurea waterproofing solution engineered for both pedestrian and vehicular applications where outstanding weathering, toughness, fast cure times, and solvent resistance are essential.

Superior Protection & Performance

DriveDeck is formulated to deliver exceptional strength and durability, ensuring long-term protection for your structure.

- **Impact and Abrasion Resistance:** Built to withstand the constant wear of traffic
- **Complete Waterproofing:** Creates a monolithic, seamless membrane that makes it easy to waterproof difficult details and protects the concrete structure and its vulnerable steel components within
- **UV Protection:** Each polyurea component is aliphatic, which extends the system's life and ensures long-term UV resistance
- **Traffic-Grade Quality:** Provides robust, traffic-grade waterproofing protection

Chemically Cured

DriveDeck's advanced chemistry ensures a reliable and rapid installation process, minimizing downtime for the customer.

- **Fast-Curing Advantage:** Cures quickly for faster installations, which helps prevent complications from unpredictable weather events and expands installation windows
- **Labor Savings:** The fast cure time allows for multiple application steps per day, resulting in labor savings for the customer
- **Consistent Results:** The two-component formulation allows for chemical curing (as opposed to moisture-curing), which delivers more consistent results and cure times

Low Odor Polyurea for Sensitive Applications

Ideal for occupied buildings and areas where minimal disruption is key.

- **Low Odor Chemistry:** A perfect solution for odor-sensitive areas such as campuses, hospitals, or busy metro areas

TRAFFIC COATING SYSTEM | D-PRIME • D-GUARD • D-GRIP

DriveDeck System Components

The complete DriveDeck system is a multi-layer coating applied over a concrete deck:

1. **Concrete Deck**
2. **D-Prime:** Two-part epoxy primer layer
3. **D-Guard:** The 100% solids, monolithic, waterproofing base layer
4. **D-Grip w/ Aggregate:** The final, durable, impact, and wear-resistant high solids wearing course

**The Next Evolution in
Vehicular Deck Protection**
